## VARIO DO 16/24

## I/O Extension Module With 16 Digital Outputs

## User Manual

This data sheet is only valid in association with the documents of the used fieldbus coupler

## Function

This terminal is designed for use within an Inline station. It is used to output digital signals.

## Features

- Connections for 16 digital actuators
- Connection of 2- and 3-wire actuators
- Nominal current of each output: 0.5 A
- Total current of the terminal: 8 A
- Short-circuit and overload protected outputs
- Diagnostic and status indicators

Figure $1 \quad$ VARIO DO 16/24 terminal with the connectors plugged in

All modules will be delivered including connectors and labeling fields

Figure 2 VARIO DO 16/24 terminal with an appropriate connector

Local Diagnostic and Status Indicators

| Des. | Color | Meaning |
| :---: | :--- | :--- |
| $\mathbf{D}$ | Green | Bus diagnostics |
| $\mathbf{1 , 2 ,}$ | Yellow | Status indication of the |
| $\mathbf{3 , 4}$ |  | outputs |

Terminal Assignment for Each Connector

| Terminal <br> Point | Assignment |
| :--- | :--- |
| $1.1,2.1$ | Signal output (OUT) |
| $1.2,2.2$ | Ground contact (GND) for 2- and <br> 3-wire-termination |
| $\mathbf{1 . 3 , 2 . 3}$ | FE (functional earth ground) <br> connection for 3-wire-termination |
| $\mathbf{1 . 4 , 2 . 4}$ | Signal output (OUT) |
| $1.5,2.5$ | Ground contact (GND) for 2- and <br> 3-wire-termination |
| $1.6,2.6$ | FE connection for 3-wire- <br> termination |

## Internal Circuit Diagram

| :--- | :--- | :--- | :--- |

## Connection Example

$\triangle$
When connecting the actuators, observe the assignment of the terminal points to the fieldbus output data (see page 5).

Figure 4 Typical actuator connections 3-wire termination
The numbers shown above the terminal indicate the mounting locations of the connectors.

## Programming Data

| ID code | $\mathrm{BD}_{\text {hex }}\left(189_{\mathrm{dec}}\right)$ |
| :--- | :--- |
| Length code | $01_{\text {hex }}$ |
| Process data channel | 16 bits |
| Input address area | 0 bytes |
| Output address area | 2 bytes |
| Parameter channel <br> (PCP) | 0 bytes |
| Register length (bus) | 2 bytes |

## Process Data

The IN process data is not available.

## Assignment of the Terminal Points to the OUT Process Data

## Technical Data

| General Data |  |
| :--- | :--- |
| Housing dimensions (width $\times$ height x depth) | $48.8 \mathrm{~mm} \times 120 \mathrm{~mm} \times 71.5 \mathrm{~mm}$ <br> $(1.921 \mathrm{in} . \times 4.724 \mathrm{in} . \times 2.815 \mathrm{in})$. |
| Weight | 130 g (without connector) |
| Operating mode | Process data operation with 16 bits |
| Connection type of the actuators | $2-$ and 3 -wire technology |
| Permissible temperature (operation) | $-25^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+131^{\circ} \mathrm{F}\right)$ |
| Permissible temperature (storage/transport) | $-25^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+185^{\circ} \mathrm{F}\right)$ |
| Permissible humidity (operation) <br> Ranging from $-25^{\circ} \mathrm{C}$ to $+55^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right.$ to $\left.+131^{\circ} \mathrm{F}\right)$ appropriate measures against increased <br> humidity $(>85 \%)$ must be taken. |  |
|  |  |

| Permissible humidity (storage/transport) | $75 \%$ on average, $85 \%$ occasionally |
| :--- | :--- |
| For a short period, slight condensation may appear on the housing if, for example, the <br> terminal is brought into a closed room from a vehicle. |  |
| Permissible air pressure (operation) | 80 kPa to 106 kPa (up to 2000 m [6562 ft.] <br> above sea level) |
| Permissible air pressure (storage/transport) | 70 kPa to 106 kPa (up to 3000 m [9843 ft.] <br> above sea level) |
| Degree of protection | IP 20 according to IEC 60529 |
| Class of protection | Class 3 according to VDE 0106, IEC 60536 |

| Interface | Through data routing |
| :--- | :--- |
| local bus interface |  |

| Power Consumption | 7.5 V |
| :--- | :--- |
| Communications power | 90 mA, maximum |
| Current consumption from the local bus | 0.675 W, maximum |
| Power consumption from the local bus | $24 \mathrm{~V} \mathrm{DC} \mathrm{(nominal} \mathrm{value)}$ |
| Segment supply voltage $U_{\mathrm{S}}$ | $8 \mathrm{~A}(16 \times 0.5 \mathrm{~A})$, maximum |
| Nominal current consumption of $U_{\mathrm{S}}$ |  |

| Supply of the Module Electronics and I/O Through Bus Terminal/Power Terminal |  |
| :--- | :--- |
| Connection method | Through potential routing |

| Digital Outputs |  |
| :--- | :--- |
| Number | 16 |
| Nominal output voltage $U_{\text {OUT }}$ | 24 V DC |
| Differential voltage for $\mathrm{I}_{\text {nom }}$ | $\leq 1 \mathrm{~V}$ |
| Nominal current $\mathrm{I}_{\text {nom }}$ per channel | 0.5 A |
| Tolerance of the nominal current | $+10 \%$ |
| Total current | 8 A |
| Protection | Short-circuit; overload |

Nominal load

| Ohmic | $48 \Omega / 12 \mathrm{~W}$ |
| :--- | :--- |
| Lamp | 12 W |
| Inductive | $12 \mathrm{VA}(1.2 \mathrm{H}, 50 \Omega)$ |

Signal delay: OFF to ON

- Ohmic nominal load
- Lamp nominal load
- Inductive nominal load

Signal delay: ON to OFF

- Ohmic nominal load
- Lamp nominal load
- Inductive nominal load
$500 \mu \mathrm{~s}$, typical
100 ms (with switching frequencies up to 8 Hz ; above this frequency the lamp load responds like an ohmic load), typical
$100 \mathrm{~ms}(1.2 \mathrm{H}, 50 \Omega$ ), typical

## Digital Outputs (continued)

Switching frequency with

- Ohmic nominal load

300 Hz , maximum
This switching frequency is limited by the selected data rate, the number of bus devices, the bus structure, the software, and the control or computer system used.

- Lamp nominal load

8 Hz , maximum

-8
This switching frequency is limited by the selected data rate, the number of bus devices, the bus structure, the software, and the control or computer system used.

| - Inductive nominal load | $0.5 \mathrm{~Hz}(1.2 \mathrm{H}, 50 \Omega)$, maximum |
| :--- | :--- |
| Overload response | Auto restart |
| Response time with ohmic overload $(12 \Omega)$ | Approximately 3 s |
| Restart frequency at ohmic overload | Approximately 400 Hz |
| Restart frequency at lamp overload | Approximately 400 Hz |
| Response after inductive overload | Output can be destroyed |
| Response time after short-circuit | Approximately 3 s |
| Reverse voltage endurance against short pulses | Yes |
| Strength against permanently applied reverse <br> voltages | Yes <br> Maximum permissible current 2 A |
| Validity of output data after connection of 24 V <br> power supply (power up) | 5 ms, typical |
| Response upon US power down | The output follows the power supply without <br> delay. |
| Limitation of the demagnetization voltage <br> induced on circuit interruption | $-15 \mathrm{~V} \leq \mathrm{U}_{\text {demag }} \leq-45.8 \mathrm{~V}$ <br> $\left(\mathrm{U}_{\text {demag }}=\right.$ demagnetization voltage) |
| Single maximum energy in free running | 400 mJ, maximum |
| Protective circuit type | Integrated 45 V Zener diode in output chip |

| Digital Outputs (continued) |  |
| :--- | :--- |
| Overcurrent shutdown | $300 \mu \mathrm{~A}$, maximum |
| Output current when switched off | 2 V, maximum |
| Output voltage when switched off | 25 mA, maximum |
| Output current with ground connection <br> interrupted | 100 mW at $1 \mathrm{k} \Omega$ load resistance, typical |
| Switching power with ground connection <br> interrupted | 1.5 A for 20 ms, maximum |
| Inrush current with lamp load |  |

| Output Characteristic When Switched On (Typical) |  |
| :---: | :---: |
| Output current (A) | Differential output voltage (V) |
| 0 | 0 |
| 0.1 | 0.04 |
| 0.2 | 0.08 |
| 0.3 | 0.12 |
| 0.4 | 0.16 |
| 0.5 | 0.20 |

## Power Dissipation

Formula to calculate the power dissipation of the electronics

$$
P_{\text {tot }}=0.19 \mathrm{~W}+\sum_{n=1}^{16}\left(0.10 \mathrm{~W}+\mathrm{I}_{\mathrm{Ln}}{ }^{2} \times 0.4 \Omega\right)
$$

With
$\begin{array}{ll}P_{\text {tot }} & \text { Total power dissipation of the terminal } \\ n & \text { Index of the number of set outputs } n=1 \text { to } 16\end{array}$
In Load current of the output $n$
Power dissipation of the housing $\mathbf{P}_{\mathrm{HOU}}$
2.7 W, maximum (within the permissible operating temperature)

Concurrent Channel Derating

| Ambient temperature $\mathrm{T}_{\mathrm{U}}$ | Maximum load current at <br> $\mathbf{1 0 0 \%}$ simultaneity | Maximum load current at $\mathbf{7 5 \%}$ <br> simultaneity |
| :--- | :---: | :---: |
| $-25^{\circ} \mathrm{C}\left(-13^{\circ} \mathrm{F}\right) \leq \mathrm{T}_{\mathrm{U}}<+40^{\circ} \mathrm{C}$ <br> $\left(104^{\circ} \mathrm{F}\right)$ | 0.50 A | 0.50 A |
| $+40^{\circ} \mathrm{C}\left(104^{\circ} \mathrm{F}\right) \leq \mathrm{T}_{\mathrm{U}}<+45^{\circ} \mathrm{C}$ <br> $\left(113^{\circ} \mathrm{F}\right)$ | 0.45 A | 0.50 A |
| $+45^{\circ} \mathrm{C}\left(113^{\circ} \mathrm{F}\right) \leq \mathrm{T}_{U}<+50^{\circ} \mathrm{C}$ <br> $\left(122^{\circ} \mathrm{F}\right)$ | 0.40 A | 0.50 A |
| $+50^{\circ} \mathrm{C}\left(122^{\circ} \mathrm{F}\right)<\mathrm{T}_{\mathrm{U}} \leq+55^{\circ} \mathrm{C}$ |  |  |
| $\left(131^{\circ} \mathrm{F}\right)$ |  |  |$\quad 0.35 \mathrm{~A} \quad 0.50 \mathrm{~A}$.

With $100 \%$ simultaneity, a load current of 0.4 A for each channel is permissible up to $50^{\circ} \mathrm{C}\left(122^{\circ} \mathrm{F}\right)$ (ambient temperature range). Above $50^{\circ} \mathrm{C}\left(122^{\circ} \mathrm{F}\right)$ a load current of 0.35 A is permissible. If a maximum of twelve channels are operated in the permissible ambient temperature range at the same time ( $75 \%$ simultaneity, maximum), a load current of 0.5 A can be tapped.

| Safety Devices |  |
| :--- | :--- |
| Overload/short-circuit in segment circuit | Electronic; with four 4-channel drivers |
| Surge voltage | Protective elements of the power terminal; <br> Protection up to 33 V DC |
| Polarity reversal of power supply | Protective elements of the power terminal; <br> It is necessary to protect the power supply. The <br> power supply unit should be able to supply 4- <br> times (400\%) the nominal current of the fuse. |
| Reverse voltage | Integrated reverse voltage protection |

| Electrical Isolation |  |
| :---: | :---: |
| To provide electrical isolation between the logic level and the I/O area it is necessary to supply the bus terminal and the digital output terminal using the bus terminal or a power terminal from separate power supply units. Interconnection of the 24 V power supplies is not allowed! |  |
| Common potentials |  |
| 24 V main power, 24 V segment voltage, and GND have the same potential. FE is a separate potential area. |  |
| Separate system potentials consisting of bus terminal/power terminal and I/O terminal |  |
| - Test distance | - Test voltage |
| 5 V supply incoming remote bus / 7.5 V supply (bus logic) | $500 \mathrm{~V} \mathrm{AC} 50 \mathrm{~Hz},, 1 \mathrm{~min}$ |
| 5 V supply outgoing remote bus / 7.5 V supply (bus logic) | 500 V AC, $50 \mathrm{~Hz}, 1 \mathrm{~min}$ |
| 7.5 V supply (bus logic) / 24 V supply (I/O) | $500 \mathrm{~V} \mathrm{AC} 50 \mathrm{~Hz},, 1 \mathrm{~min}$ |
| 24 V supply (I/O) / functional earth ground | 500 V AC, $50 \mathrm{~Hz}, 1 \mathrm{~min}$ |

| Error Messages to the Higher-Level Control or Computer System |  |
| :--- | :--- |
| Short-circuit/overload of an output | Yes |
|  | An error message is generated when an output is shorted and switched on. Also, the <br> diagnostic LED (D) flashes on the terminal at 2 Hz under these conditions. |
| Operating voltage out of range | No |

## Ordering Data

| Description | Order Designation | Order No. |
